Short Bio

During my research career I have been focusing on the **multi-perspective study of Constraint Optimisation**, by **making strong contributions to the state-of-the-art** both on **theoretical** and **practical** aspects and by tackling **different real-world problem domains** (e.g., collective energy purchasing, ridesharing, team formation, high-performance computing). I received my Ph.D. (Doctor Europæus) in April 2016 at the University of Verona. The research work of my Ph.D. thesis has been published in **10** articles in some of the most prestigious venues of the AI community, both leading international peer-reviewed journals and top-level international conferences. As a result, in 2017 I was awarded with a **Marie Skłodowska-Curie Individual Fellowship**, the most competitive and prestigious postdoctoral fellowships at European level, which I spent at the IIIA institute of the Spanish National Research Council (CSIC). As a Marie-Curie Fellow, I continued working on prominent real-world Collective Intelligence applications such as ridesharing and team formation, publishing **5** articles both in leading international journals and top-level international conferences. Subsequently, I continued as a Postdoctoral Research Fellow at the IIIA-CSIC as part of the LOGISTAR project, in charge of designing and implementing optimisation solution techniques for collaborative transportation and logistics (co-loading). Currently I am the **Principal Investigator** of the AVI-IA project, whose objective is to develop an AI-based system that guides strategic decisions in purchasing processes. Such a system will include an analysis module that allows to evaluate the reliability (or the risk) associated with each provider and a recommendation module that proposes the best negotiation strategy based on the historical data about completed negotiations.
