Summary of CV

This section describes briefly a summary of your career in science, academic and research; the main scientific and technological achievements and goals in your line of research in the medium -and long- term. It also includes other important aspects or peculiarities.

I received the Ph.D. degree in computer science from the University of Verona, Italy, in 2016. I am currently a Marie Skłodowska-Curie Fellow at IIIA-CSIC, as part of a H2020-MSCA-IF-2016-funded project entitled "Collectiveware: Highly-parallel algorithms for collective intelligence". My research focuses on multi-agent systems, a theoretic model used to describe and solve problems in many real-world scenarios, including collective energy purchasing and ridesharing. The complex dynamics among the large number of entities in these systems usually result in very hard optimisation problems. My research aims at dealing with this complexity, both from a theoretical perspective (proposing novel algorithms and models) and from a practical one, using Graphics Processing Units (GPUs) to speed-up the execution of algorithms used to compute the solutions.
